

VULCAN INDUSTRIES

Vulcan Clean-Out Concrete Cleaning Ball

Concrete pumps are used to place concrete with pinpoint accuracy. Boom pumps for pumping very high volume of concrete, whereas Line pumps are used for medium/lower volume of concrete. This process has proved to be a game-changing revolutionary method in concrete handling and placement. However, this process leads to a lot of scaling in the tubes, which results in lowering the productivity, over a period of time. Manual cleaning of these tube/pipes are strenuous and takes a lot of time.

Vulcan Clean-out Balls are an easy and one stop solution to such a grave problem. With a method as simple as this, tubes/pipes can be cleaned within no time and almost no effort. Moreover, our clients save additional labour charge and additional water consumption, which is nothing less than a Boon in this era.

Technical Details:

Sizes: Ranging from 50mm to 150mm Diameter.

Density: Soft (S), Medium Soft (MS), Medium (M) and Firm (F).

Colour: Orange.

Life: Depending On Usage

Application:

Cement pumping systems.

Waste handling systems.

Oil drilling/pumping systems.

Slurry/Sludge pumping systems.
